Continuation of 5. does NOT place the application in condition for allowance because: regarding the applicant's argument (112 rejection) that the original disclosure does disclose a gate electrode over the gate insulating film and the first insulating film having the side that is aligned with the side of the crystalline semiconductor island, the Examiner respectfully disagrees. Fig. 1E does not show the gate electrode and FIG. 2A does not show the first insulating film 110 aligned with the side of the crystalline semiconductor island 107. The final structure in FIG. 2E clearly does not show the first insulating film being aligned with the side of the crystalline semiconductor island since the first insulating film 110 extends past the crystalline semiconductor island 107. Page 15, lines 18-22 of the applicant's disclosure does not state anything about the first insulating film having a side that is aligned with the side of the crystalline semiconductor island. Regarding the applicant's argument (103 rejection) that the combination of Yamazaki and Matsumoto does not specify which gate insulating film would have a side aligned with the side of the crystalline semiconductor island, this is not found persuasive since Yamazaki clearly shows in FIG. 3 that the insulating film 3 has an edge that is aligned with the semiconductor island.
